PROFESSIONAL SUMMARY

Cloud infrastructure and Identity & Access Management (IAM) engineer with 6+ years supporting business-critical platforms in the aviation and insurance domains, across Production, UAT, DR and Development. Maintains 99.9%+ availability for a baggage reconciliation platform at international airports.

Designed and implemented Microsoft Entra ID SSO, MFA onboarding, guest self-registration and identity lifecycle management for global airline users, including a custom guest registration portal API integrated with Entra ID through Microsoft Graph.

Strong in Windows Server, Linux, AWS, Active Directory and Group Policy, IIS, F5, SSL/TLS lifecycle, vulnerability remediation, DR and RCA. Automates patching and operations for 100+ servers with Ansible and PowerShell (~80% less manual effort), and uses AI tools such as Claude and Microsoft Copilot for scripting, documentation and incident analysis. Building Terraform, Docker and Kubernetes skills through the BagTrace project.

TECHNICAL SKILLS

Identity & Access	Microsoft Entra ID (SSO, MFA, Conditional Access, B2B Guest Access, App Registrations), Microsoft Graph API, Identity Lifecycle Management, Active Directory, Group Policy
Cloud	AWS (EC2, IAM, VPC, Route 53, EBS, S3, Security Groups, Snapshots)
Operating Systems	Windows Server 2003–2025, Linux RHEL (user management, services, cron, patching)
Automation	Ansible, PowerShell (incl. WinRM remoting), Bash/Shell Scripting
CI/CD & Version Control	Git, GitHub, GitHub Actions, Jenkins
AI for IT Ops	Claude (Anthropic), Microsoft Copilot, Generative AI for scripting, runbooks, knowledge articles and RCA analysis
Integration	REST APIs, JSON, ASP.NET, C#, authentication workflows, self-service portals hosted on IIS
Web & Middleware	IIS 6–10, Apache, Nginx, Tomcat, WebSphere, Node.js, IBM MQ (basic)
Networking	F5 BIG-IP, DNS, DHCP, TCP/IP, HTTPS, Firewalls
Virtualization	Hyper-V, VMware ESXi/vSphere (basic), Dell iDRAC
Monitoring	Nagios, Site24x7, Grafana, Power BI
Security	Vulnerability Remediation (Tenable, Nexpose), Patch Management, Server Hardening, SSL/TLS Certificate Lifecycle
ITSM & Process	ServiceNow, BMC Remedy, Cherwell, ITIL (Incident, Change, Problem), CAB, RCA
Aviation Domain	Zafire FirstBag (Baggage Reconciliation), Airline Onboarding & DCS Integration, IATA BSM/DELBSM, SITA & Amadeus Messaging, SOTI MobiControl
DevOps (projects)	Terraform, Docker, Kubernetes (BagTrace project on GitHub)

PROFESSIONAL EXPERIENCE

Unisys India Pvt. Ltd. — Aug 2021 – Present

Senior Maintenance & Support Engineer (Feb 2025 – Present) | Application Development Engineer (Aug 2021 – Jan 2025)

Aviation Client – Airport Baggage Reconciliation System (Zafire FirstBag)

Identity & Guest Registration Platform

- Designed and implemented **Microsoft Entra ID SSO** and MFA onboarding for airline and ground-handler users across multiple international airport environments.
- Developed a **custom guest registration portal API** integrated with Entra ID through Microsoft Graph, automating invitations, self-service registration and MFA enrolment so external airline users onboard without manual admin work.
- Led the **MFA rollout for global airline users**: identity migration, account linking, user onboarding and authentication troubleshooting.
- Manage guest account lifecycle and access governance through Entra ID and Microsoft Graph.

Infrastructure & Operations

- Provide L2/L3 support for FirstBag, maintaining **99.9%+ availability** for airline and ground-handling operations.
- Migrated Domain Controllers from Windows Server 2016 to 2022 with **zero production downtime**.
- Automated Windows patching and controlled reboots for **100+ servers** with Ansible and PowerShell over WinRM, replacing manual server-by-server patching.

- Built PowerShell and Ansible automation for health checks, Tenable/Nexpose vulnerability remediation and reporting, **reducing manual effort by ~80%**.
- Monitor servers and services with Nagios, Site24x7 and Grafana; triage alerts and drive incidents to resolution within SLA.
- Onboard new airlines to FirstBag (DCS integration, message gateway configuration, end-to-end testing) and troubleshoot **IATA BSM/DELBSM** message flows across SITA, Amadeus and IBM MQ.
- Support Hyper-V and Dell iDRAC-managed hardware; manage airport PCs and handheld scanners with SOTI MobiControl and scanner SIMs in Telstra Control Center (Jasper).

AI-Assisted Operations

- Use Claude and Microsoft Copilot to draft automation scripts, SOPs, runbooks and knowledge articles, and to speed up incident investigation, patch planning and RCA.

Portakabin

- Supported AWS-hosted Windows and Linux environments across Production, UAT and Development: EC2, EBS, IAM, Security Groups, Route 53 and snapshot management.
- Supported application deployments on IIS, Apache, Nginx and Node.js with tested rollback plans.
- Administered Linux servers: user management, services, cron jobs and OS patching.
- Owned the SSL/TLS certificate lifecycle (requests, renewals, chain validation, bindings) and strengthened TLS configurations, with **zero certificate-expiry incidents**.

Globe Life Insurance

- Administered IIS 6–10 web farms hosting enterprise .NET applications across development, staging and production.
- Remediated Windows Server and IIS vulnerabilities (missing patches, outdated components, insecure configurations, weak TLS) through to rescan and closure.
- Implemented **GPO-driven automated RDP certificate renewal** across the estate, eliminating a recurring vulnerability class.
- Subject Matter Expert for OpenText RightFax and GlobalSCAPE EFT: upgrades, patching, vendor coordination and licensing.
- Built Power BI dashboards on live ServiceNow data for monthly and quarterly operational reporting.
- Contributed to Disaster Recovery and IP consolidation; wrote RCAs for Sev1/Sev2 incidents and presented changes at CAB.

Sonyo Management Consultants Pvt. Ltd. **Aug 2020 – Aug 2021**

Senior Administrator | Client: Unisys / Globe Life Insurance

- Supported IIS 7.5/8.5 production web farms hosting ASP.NET applications and led application migrations from IIS 7.5 to 8.5.
- Managed F5 BIG-IP load balancer configurations, traffic routing and failover testing.
- Performed server hardening, patch management and daily health checks, resolving production incidents within SLA.
- Configured DebugDiag for root cause analysis during application outages; supported releases through ITIL change management.

PROJECTS

BagTrace: 3-tier DevOps project – github.com/RavindraSurathu/bagtrace-devops **2026**

- Airport baggage-tracking app (Nginx, Python API, MySQL) deployed five ways: **Shell scripts, Ansible roles, Terraform on AWS** (VPC, private subnets, ALB, bastion), **Docker Compose** and **Kubernetes** (StatefulSet, HPA, Ingress, NetworkPolicies).
- **GitHub Actions CI** runs unit tests, ShellCheck, Terraform validate, Ansible syntax checks and Kubernetes schema validation, then builds and pushes container images.

EDUCATION

Master of Information Technology (Computer Networks) – Charles Sturt University, Melbourne, Australia **2018**

Bachelor of Technology (Electrical & Electronics Engineering) – JNTU Kakinada **2015**

CERTIFICATIONS & TRAINING

AWS Certified Cloud Practitioner **2023 – 2026**

DevSecOps with AWS – AI Assisted, Joindevops – Linux, Docker, Kubernetes, Terraform, Jenkins **In progress**
